## Divine Windows Seeing God through the lens of science

David Gregory

Pb, ISBN 978 1 80039 331 8, £12.99

Too often, people assume that science and faith are opposed to one another. Yet at the start of David Gregory's own journey of faith, it was science that inspired him to consider 'perhaps there is a God'. As that journey continues, it has often been the visual experience of nature and science that has provided further – and deeper – insights into God. Now, in *Divine Windows*, he brings 'the lens of science' to God's creation in a stunning, full-colour gift book. He writes: 'In an age in which the visual plays an important part in the communication of science's expanded vision of the cosmos, I wanted to provide a way that would retrain people's looking at the world to enable awareness of the divine presence woven within it.'

David also explores an alternative way of engaging science and faith at a popular, non-technical level, that draws upon the imagination and stirs the emotions. 'I tried not to have a debate about God's existence. Behind the book is a presumption that God is there. This is not apologetics, it's about the crossover between art, science and spirituality.'

### Praise for Divine Windows

'This book leads the reader through metaphor, wonder and play to a deeper appreciation of science and God. If you have wondered how science and religious faith can be held together, this book is for you.' – *Bethany Sollereder, lecturer in science and religion, The University of Edinburgh*

'David Gregory explodes the myth that science and faith are boring! Rather he stimulates the imagination and engages curiosity to get to a picture of God that is compelling and liberating.' – *David Wilkinson, professor of theology and religion, Durham University*

'David Gregory doesn't just argue that science and faith can coexist – he shows us how science can become a sacred lens through which we glimpse the presence of God. This book invites people to rediscover a deeper vision of Christ – not just as the Lord of Sunday mornings, but as the one in whom stars burn, tectonic plates shift and every breath holds divine mystery. This is not just a helpful book. It's a needed one.' – *Andy Thomas, Baptist pioneer minister, producer and director, Fuelcast Films*

### About the author

David Gregory is Baptist Missioner for Science and Environment. He holds a PhD from the University of London in atmospheric physics and a degree in physics and astrophysics from Leicester University. David is a regular speaker with 'God and the Big Bang', exploring science and faith issues with both primary and secondary school students. More information [here](https://www.brf.org.uk).
